

# Tear Stain Soft Chews

## For Dogs and Cats

Tear staining in dogs and cats can be the result of excessive tear production, inadequate tear drainage or a combination of both. This excess of tears around the eyes of cats and dogs can become a fertile breeding ground for bacteria and yeast that can lead to irritation and unsightly reddish staining.

Tear Stain Soft Chews are formulated with herbal ingredients that are recommended to help assist with the alleviation of tear stains and their cause.

- Natural antibiotic properties without the harmful effects of antibiotics.
- Palatable soft chews that dogs and cats love.
