# A-Gland Soft Chews

## Anal Gland Support for Dogs

Anal sac disease begins as an uncomfortable impaction and can progress to an infection or abscess. Anal sac impaction can develop in dogs when the natural anal sac fluids are not completely expressed as the dog defecates. The fluid can become so dry and thick that it plugs up the anal sac openings causing the impaction. Left untreated, the impaction will turn into an infection.

Many veterinarians will recommend a high fiber diet or supplement to aid in the natural expression of anal sacs.

### A-Gland Soft Chews Are Formulated With Natural Fiber and Herbal Ingredients
